

APX Batch Components

- **Job:** It is an entity that encapsulates an entire batch process and it is just the top of an overall hierarchy.
- **Library:** Encapsulates the business logic. It publishes its interface so that it can be used by third parties.
- **DTO:** Representation of a Business Entity in the form of a Bean.

The Architecture provides utilities that facilitate access to data sources.

RECOMMENDATION: Whenever possible, use the Readers and Writers provided by Spring Batch.

Utilities

List of utilities that can be used in APX Batch:

- Jdbc
- Document Creator
- Rules
