

Init DTO

A DTO is a Java representation of a Business Entity.

A DTO entity can be created running the following command with the APX CLI:

```
apx init dto -u=TEST -c=001 -d="New DTO" --domain=domain
```

The output should look something like this:

```
A new project is about to be created with this settings:
```

```
APX Architecture
```

- Group: com.bbva.elara
- Artifact: elara-project
- Version: 7.12.9

```
Artifact(dto)
```

- Application(UUAA): TEST
- DTO code "C[code]": 001
- Project name: TESTC001
- Dto domain "com.bbva.test.dto.[domain]": domain
- Description: New DTO
- Version: 0.0.0
- OutPut Directory: /home/user/code/test/TESTC001

```
Add Class to Artifact
```

If you are creating a class at the domain level, leave the subpackage blank, otherwise enter the values separated by ".", for example:

- Domain = "com.bbva.test.dto.domain"
- Subpackage = "sub1.sub2"
- Package = "com.bbva.test.dto.domain.sub1.sub2"
- Subpackage "com.bbva.test.dto.domain.[subpackage(s)]":
- Class name: ExampleDTO
